Together,
let’s take precautionary measures
Keeping our distances, maintaining our ties

The current sanitary crisis implies new rules within the workplace: social distancing is necessary to preserve our health and the health of others. We must do our best to ensure that these essential measures can be strictly applied, while preserving the social link and exchanges so that work can be resumed with serenity.

In order to accompany its partners and clients, Manade has developed a series of barrier screens in materials that have been carefully selected for the excellence of their properties.
New Port Screen

Adapting to workstations

The NEW PORT screen is perfectly stable on a base, while remaining mobile. It allows you to delimit evolving zones according to the nature of the activities. It is ideal for large and shared work surfaces.

On clamps or median fixings, it divides individual or juxtaposed desks face to face and on the side.

Providing sustainable solutions to protect oneself

In order to accompany its partners in going back to work, Manade has redesigned the NEWPORT screen: its height has been increased to 60 cm to protect against projections.

Manade has chosen tempered glass and antibacterial melamine, healthy and easy to clean, they limit surface contamination while preserving the functionality of the workstations.

Working with a screen is perceived as extremely safe by employees.
Tempered glass

Glass is a material with many assets over transparent plastics:

- **Ecological**: composed essentially of natural minerals, it is fully and infinitely recyclable.
- **Healthy**: it is resistant to solvents and can be cleaned indefinitely with alcohol.
- **Reliable and durable**: totally waterproof, it is unalterable. Tempered glass is also very resistant to shocks.

**ECOLOGICAL MATERIAL**
- fully and infinitely recyclable

**HEALTHY MATERIAL**
- Waterproof and inert, it doesn’t react to foreign substances and doesn’t absorb them.

**RESISTANCE TO HEAVY CLEANING**

**RESISTANCE TO SCRATCH**

**RESISTANCE TO IMPACT**
- Up to 5 times more impact resistant than a conventional glass

**RESISTANCE TO HEAT**
- Can withstand temperature variations of 200°C

**TEMPERED GLASS**
- Forms a cluster of blunt flakes when it shatters
Antibacterial melamine

The antibacterial protection by Sanitized® silver ions is integrated within all our melamine coated panels, a well-known brand, whose effectiveness has been proved and demonstrated in the textile and plastic industries.

The Sanitized® treatment is Service Sector compatible

The certificate released by Sanitized® AG* is renewed every year following laboratory tests.

Sanitized® is a Swiss company and is the leading worldwide producer of the antimicrobial hygiene function with 50 years expertise in treatments based on silver ions.

* Compliant with regulations EU 528 / 2012 on biocide products and REACH on chemicals.

Enhanced protection integrated within the material

The silver ions encapsulated in glass ball are activated when entering into contact with humidity. They kill surface bacteria and block the cell division process, thus reducing bacteria proliferation.

The Ag⁺ ion-based Sanitized® treatment is a non-migratory inorganic solution that is not modified with time. Integrated within the material in order to assure antibacterial protection throughout its lifecycle, this biocidal additive does not influence the technical and aesthetic performances of our HPL products.

Approved internationally*, such products offer high levels of safety for people and environment.

* Compliant with regulations EU 528 / 2012 on biocide products and REACH on chemicals.
Recognized for its excellent mechanical performance, powder painting confers a unique smooth aspect to the support and provides perfect reproducibility of hues.

Solvent-free, powder painting is the cleanest technology, and thus represents an undeniable asset in a world more and more respectful of the environment.

Manufactured and tested individually in accordance with the standards in force, powder paints provide the best mechanical performance, particularly with regard to resistance to shocks, flexibility and surface hardness.

**CLEANING INSTRUCTIONS**

**CONTRAINDICATIONS**

**NEVER USE ACID OR VERY ALKALINE PRODUCTS OR SOLVENTS**
For more serenity in the office, LIMIT CONTAMINATION OF SURFACES by opting for an antibacterial coating on your screens.

Getting organised for work

Production and processing are carried out by our dedicated and motivated teams! All measures have been taken to preserve their health. A «dream team» has been appointed to make our masks. Our sales teams are at your disposal to answer any questions you may have.
REDESIGNING YOUR WORKSTATION

Anticipating a return to the office in the greatest serenity by integrating screens suitable for the sanitary measures to be followed.

Sanitary measures TO ADOPT IN THE WORKPLACE

- Encourage the use of disposable surgical masks
- Cough or sneeze into your elbow
- Use single-use tissues and discard them
- Wash regularly your hands with soap or hydroalcoholic gel
- Prefer remote meetings by videoconference or by phone
- Keep 1.5 m (5 feet) of physical distance between each person and limit gatherings of employees in small spaces
- Clean your keyboard, mouse, phone... every day within a shared office.
